

1.	<p>Write a Java program to print 'Hello' on screen and then print your name on a separate line.</p> <p>Expected Output:</p> <p>Hello</p> <p>Donald Trump</p>
2.	<p>A school has following rules for grading system:</p> <ul style="list-style-type: none"> a. Below 25 - F b. 25 to 45 - E c. 45 to 50 - D d. 50 to 60 - C e. 60 to 80 - B f. Above 80 - A <p>Ask user to enter marks and print the corresponding grade.</p>
3.	<p>Create a function that takes two numbers as arguments and returns the GCD of the two numbers.</p> <p>Examples</p> <p>$\text{gcd}(3, 5) \rightarrow 1$</p> <p>$\text{gcd}(14, 28) \rightarrow 14$</p> <p>$\text{gcd}(4, 18) \rightarrow 2$</p>
4.	<p>Given an integer, create a function that returns the next prime. If the number is prime, return the number itself.</p> <p>Examples</p> <p>$\text{nextPrime}(12) \rightarrow 13$</p> <p>$\text{nextPrime}(24) \rightarrow 29$</p> <p>$\text{nextPrime}(11) \rightarrow 11$</p> <p>// 11 is a prime, so we return the number itself.</p>
5.	<p>Write a Java program that takes two numbers as input and display the product of two numbers.</p> <p>Test Data:</p> <p>Input first number: 25</p> <p>Input second number: 5</p> <p>Expected Output:</p> <p>$25 \times 5 = 125$</p>

6.	<p>Write a Java program to print the sum (addition), multiply, subtract, divide and remainder of two numbers.</p> <p>Test Data: Input first number: 125 Input second number: 24 Expected Output: $125 + 24 = 149$ $125 - 24 = 101$ $125 \times 24 = 3000$ $125 / 24 = 5$</p>
7.	<p>Write a Java program that takes a number as input and prints its multiplication table upto 10.</p> <p>Test Data: Input a number: 8 Expected Output: $8 \times 1 = 8$ $8 \times 2 = 16$ $8 \times 3 = 24$ $8 \times 10 = 80$</p>
8.	<p>Create a function that finds how many prime numbers there are, up to the given integer.</p> <p>Examples <code>primeNumbers(10) → 4</code> // 2, 3, 5 and 7 <code>primeNumbers(20) → 8</code> // 2, 3, 5, 7, 11, 13, 17 and 19 <code>primeNumbers(30) → 10</code> // 2, 3, 5, 7, 11, 13, 17, 19, 23 and 29</p>
9.	<p>Write a Java program to print the area and perimeter of a circle.</p> <p>Test Data: Radius = 7.5 Expected Output Perimeter is = 47.12388980384689 Area is = 176.71458676442586</p>
10.	<p>Write a Java program that takes three numbers as input to calculate and print the average of the numbers.</p>
11.	<p>Write a Java program to print the area and perimeter of a rectangle.</p> <p>Test Data: Width = 5.5 Height = 8.5 Expected Output Area is $5.6 \times 8.5 = 47.60$ Perimeter is $2 \times (5.6 + 8.5) = 28.20$</p>
12.	<p>Write a Java program to swap two variables.</p>

13.	<p>Write a Java program to compare two numbers.</p> <p>Input Data:</p> <p>Input first integer: 25</p> <p>Input second integer: 39</p> <p>Expected Output</p> <p>25 != 39</p> <p>25 < 39</p> <p>25 <= 39</p>
14.	<p>Write a Java program and compute the sum of the digits of an integer.</p> <p>Input Data:</p> <p>Input an integer: 25</p> <p>Expected Output</p> <p>The sum of the digits is: 7</p>
15.	<p>Write a Java program to print the odd numbers from 1 to 99. Prints one number per line.</p> <p>Sample Output:</p> <p>1</p> <p>3</p> <p>5</p> <p>....</p> <p>97</p> <p>99</p>
16.	<p>Create a function that takes an integer n and reverses it.</p> <p>Examples</p> <p>rev(5121) → "1215"</p> <p>rev(69) → "96"</p> <p>rev(-122157) → "751221"</p> <p>Notes</p> <p>This challenge is about using two operators that are related to division.</p> <p>If the number is negative, treat it like it's positive.</p>
17.	<p>Write a Java program to calculate the sum of two integers and return true if the sum is equal to a third integer.</p> <p>Sample Output:</p> <p>Input the first number : 5</p> <p>Input the second number: 10</p> <p>Input the third number : 15</p> <p>The result is: true</p>
18.	<p>Write a Java program that accepts three integer values and return true if one of them is 20 or more and less than the subtractions of others.</p> <p>Sample Output:</p> <p>Input the first number: 15</p> <p>Input the second number: 20</p> <p>Input the third number: 25</p> <p>false</p>
19.	<p>Write a Java program that accepts two integer values between 25 to 75 and return true if there is a common digit in both numbers.</p> <p>Sample Output:</p> <p>Input the first number : 35</p> <p>Input the second number: 45</p> <p>Result: true</p>

20.	Write a Java program to compute the sum of the first 100 prime numbers. Sample Output: Sum of the first 100 prime numbers: 24133
